

Pilot Scalability Scorecard

A practitioner reflection tool for assessing whether a pilot has the evidence, capacity, and context needed to take on the challenges of scaling.

How to score: Rate each condition 1-5 based on the evidence available at the end of the pilot. Score the condition, not your confidence in the technology alone.

Use the score to ask: What is working? What is still assumption-dependent? What must be strengthened before volume, geography, or complexity increases?

Condition	Core question	What a scalable pilot needs to demonstrate	Reflection prompts and post-pilot lens	Score 1-5
1. Measure viability	Does it actually work?	Demonstrate: Reliable, measurable, cost-effective performance.	Also consider: Cost effectiveness and \$ per savings. Post-pilot: Do savings need adjustment? Can installation be made more effective?	[1] [2] [3] [4] [5]
2. Market viability	Will enough customers participate?	Demonstrate: Durable demand beyond the initial cohort.	Also consider: Customer education and motivation. Post-pilot: Was the experience positive enough to sustain participation and referrals?	[1] [2] [3] [4] [5]
3. Customer reach	Can the program consistently find and convert participants?	Demonstrate: A repeatable customer acquisition and access mechanism.	Also consider: Enrollment volume and conversion. Post-pilot: Was demand mostly pent-up/eager adopters, or did the pilot reach new customers?	[1] [2] [3] [4] [5]
4. Delivery capacity	Can the market deliver the work repeatedly?	Demonstrate: Sufficient contractors, vendors, and skilled workforce.	Also consider: Vendor network and workforce development. Post-pilot: How much can the network deliver in a defined timeframe? What is realistic now vs. buildable next?	[1] [2] [3] [4] [5]
5. Operating capacity	Can the organization manage increasing volume?	Demonstrate: Repeatable processes, data, approvals, QA, reporting, and coordination.	Also consider: Data and reporting. Post-pilot: What should be automated, consolidated, standardized, or offloaded to partners?	[1] [2] [3] [4] [5]
6. Organizational / context readiness	Can the model be sustained and adapted?	Demonstrate: Funding, governance, management, institutional capacity, and local adaptability.	Also consider: Program management and geographic replicability. Post-pilot: Where does the market need to grow? What training, certification, and support will make expansion more uniform?	[1] [2] [3] [4] [5]

1 - Not demonstrated Little evidence; major unknowns remain.	2 - Early signal Some evidence, but highly dependent on pilot conditions.	3 - Partially demonstrated Workable model with meaningful gaps or variability.	4 - Strong evidence Repeatable under expected operating conditions.	5 - Demonstrated and resilient Evidence suggests the model can absorb greater volume/complexity.
--	---	--	---	--

Score total: _____ / 30	Average: _____ / 5	Lowest-scoring condition: _____	My scale-up confidence (1-5): _____
What is strongest today? _____	Biggest gap to close? _____	Evidence I still need: _____	Next scale test: _____

Interpretation: Use the pattern, not only the total. A high average with one weak condition can still create a scaling bottleneck. A strong score means evidence is accumulating - not that uncertainty has disappeared.
